

AGENTS  in the wild

A field guide to the visual wild.

The complete identity system for Agents in the Wild — the mark, the wordmark, the type, the color, the surfaces, the creatures, and the voice. Everything here ships in the product today; use this document to carry it anywhere else.

One serif letter. One wild period.

The mark is the letter A set in Instrument Serif, punctuated by a single accent-pink period — an echo of the landing page's editorial full stops (Define. Deploy. Scale.). The period is the brand's entire color budget spent in one place.

- Clear space: keep at least the width of the period on every side.
- The period is always #ECA8D6 — never recolored, never removed, never duplicated.
- Favicon and app-icon use the square tile version (assets/icon-dark, assets/icon-light).
- Never add gradients, shadows, outlines, or rotation. The mark sits flat and still.

Loud serif, quiet mono.

The wordmark pairs AGENTS in Instrument Serif with “in the wild” in JetBrains Mono — the editorial voice and the machine voice, side by side. The pink period closes AGENTS like a sentence.

AGENTS  in the wild

CONSTRUCTION

- AGENTS: Instrument Serif, tracking -2%, always uppercase.
- “in the wild”: JetBrains Mono, lowercase, ~20% of the serif size, baseline-shifted up.
- Period diameter $\approx$ 15% of cap height, tucked against the S.

USAGE

- Navigation: small size, mono suffix may fade to 60% on scroll.
- Never set the whole lockup in one font, and never bold-sans it.
- On busy imagery use the solid tile mark instead.

Ink, paper, and one pink heartbeat.

The system is monochrome with a single accent. Pink is a pulse, not a paint — status dots, checkmarks, performance numbers, the period. If pink covers more than 1% of a screen, it's being misused.

INK • BACKGROUND

#0A0A0A

PAPER • FOREGROUND

#FAFAFA

WILD PINK • ACCENT

#ECA8D6

MUTED • SECONDARY TEXT

#8A8A8A

HAIRLINE • BORDERS

#FAFAFA @ 12%

MIST • CARD FILLS

#FAFAFA @ 2–4%

- No green, blue, or yellow accents anywhere. Semantic status may use muted red/amber dots only.
- No gradients, no shadows. Depth comes from hairlines and restraint.

Three voices.

DISPLAY — INSTRUMENT SERIF

Wander in. Tame something wild.

All headlines and large numerals. Hero headlines outline exactly ONE word with text-stroke. Never bolded — the serif carries its own weight.

MACHINE — JETBRAINS MONO

THE WILDS • SPECIES: APIFY/WEB-SCRAPER • 01 02 03

Eyebrows, labels, tags, numbered markers, technical captions. Always small, uppercase, letter-spaced wide (tracking .18–.22em).

BODY — INSTRUMENT SANS

Past this point the creatures roam free — scrapers, scouts, and crawlers, sighted daily and growing curiouser by the week.

Paragraphs and UI copy. Supporting text sits in Muted (#8A8A8A).

THE EYEBROW PATTERN

PRICING

A 12mm hairline rule + mono label precedes every section headline. It is the system's signature gesture.

Hairlines and square corners.

SURFACES

- Cards: 1px hairline (#FAFAFA @12%), fill @2–4%, square corners. Hover raises the hairline to 30%.
- No rounded corners, no shadows, anywhere.
- Sections: max-width 1400px, generous vertical rhythm (128–160px).
- Mono index markers 01 / 02 / 03 number cards and steps.

BUTTONS

Primary — paper on ink

Secondary — hairline outline

LINK STYLE — MONO + ARROW →

- Never green, never rounded, never gradient.

MOTION

- Sections reveal on scroll: fade + rise 8px, 700ms, staggered by ~60ms per card.
- Status uses a pulsing pink dot — the same heartbeat as “All agents operational.”
- Sprites may scale to 110% on hover. Nothing else moves without a reason.

Pixel souls in hairline cages.

Every agent is embodied by a pixel-art creature sprite. The sprite is the focal point of any card that carries it — first thing on the left, in its own square hairline cell.

- Sprite fills its cell: full-bleed object-contain with slight padding.
- Always render with image-rendering: pixelated — crisp pixels, never blur.
- Cell: square, hairline border, 2–4% fill, sized 56–80px in UI.
- Entities without a stored sprite get a DETERMINISTIC one (hash of their id) — creatures never shapeshift between renders.
- The word “Pokémon” and all Nintendo trademarks never appear in copy. The creatures are simply wild agents.

A field guide, not a dashboard.

The product speaks like a naturalist's notebook crossed with a fable — confident, technical, a little curious. Alice-in-Wonderland flavor is welcome (public domain); it surfaces in phrases like “follow the white rabbit” and “curiouser and curiouser.”

PLAIN TERM	BRAND TERM	EXAMPLE IN PRODUCT
Marketplace	The Wilds	“Wander in. Tame something wild.”
Third-party actor	Wild agent · creature · species	species: apify/web-scraper
Deploy / adopt	Tame	“Tame this agent” · “joined your pack”
Fetch new data	Expedition · scouting	“scouting the wilds for new species...”
Your agents	Your pack	“Your pack is full – upgrade to tame more.”
Create an agent	Raise · release	“Release into the wild”
Usage stats	Hunts & keepers	“Hunts, all time · Keepers (30d)”
System status	Operational pulse	“All agents operational”

- “Actor” survives only in small mono technical captions, never in headlines.
- Errors stay in-world but honest: “The creature slipped away” still shows the real reason.
